

SITE SURVEY & 3D READINESS HANDOFF

A3-EC01-06 · 3D / PILOT READINESS MATRIX

PRODUCTION P2-06 · STAGE P2_CONTEXT_REAL_BUILDING

TYPE PT-06 REFERENCE FLOW / TBD REGISTER

IR FROZEN · PAGE SPEC PAGE_SPEC_READY

PRIMARY ENGINEERING QUESTION

What EC-01 site-survey and MCD-baseline facts are actually usable for 3D massing and pilot work today, and which remain blocked pending field validation?

CORE THESIS

3D MASSING MAY PROCEED ON FLOOR COUNT AND FOOTPRINT SHAPE ALONE.

Nothing else is ready. Unknown engineering geometry remains unknown in 3D.

PRIMARY VISUAL — 3D USABILITY MATRIX (7 rows, source order preserved · 6 of 7 require field confirmation)

FACT	DIRECT USE IN BLENDER?	USE AS CONSTRAINT?	NEEDS FIELD CONFIRMATION?	DO NOT MODEL	PROVENANCE
9 floors	Yes	—	No	—	VERIFIED
Stepped (non-rectangular) footprint outline, Image 3	No — dimensions incomplete	Yes — DERIVED constraint on massing shape, supersedes a simple-rectangle assumption	Yes, before final massing	—	DERIVED
Footprint area (site-coverage)	No — not established	No — 1,248 m² / 550 m² are area sub-categories, not footprint values	Yes — needs dimensioned plan or field survey	Do not model any area-derived footprint	PARTIAL
3 entrance/staircase cores	No exact coordinates	Yes, as section-count constraint	Yes (exact spacing)	—	TBD
Floor plan room layout (SRC-004 photographed sheets)	Partial — legible portions only	Yes — DERIVED reference, one representative floor	Yes, for illegible dimensions	—	PARTIAL
Roof/basement	No	No	Yes	Do not invent	TBD
Engineering rooms/risers	No	No	Yes	Do not invent — no location evidence exists	TBD

SITE-SURVEY / FIELD-CONFIRMATION GAPS (5 categories)

PHYSICAL

Entrance layout/numbering vs. documented layout; basement access; technical-room locations; roof access; footprint outline verification.

ENGINEERING

Heat entry/metering, water entry/meter, electrical main board, sewer collector/outlet locations; gas presence/absence.

DEVICE DEPLOYMENT

Mounting positions, available power, environmental conditions, access restrictions — none currently known.

CONNECTIVITY

Cellular signal conditions, basement/technical-room penetration, candidate edge location, direct-cellular feasibility — TBD WITH BEELINE / SITE SURVEY.

DOCUMENTATION

EVIDENCE / PROVENANCE STATES (5 states)

VERIFIED	Directly usable now.
DERIVED	Explicit constraint derived from evidence, not a direct source fact.
PARTIAL	Some evidence exists; not established.
TBD	Not established; requires field confirmation.
NO EVIDENCE	Reviewed evidence does not support the claim — absence is not proved.

Epistemic evidence axis, not a severity ladder.

REFERENCE CANDIDATE — HEAT-03 (not installed / not validated)

Question: can a real HEAT-03 (or equivalent heating mixing/elevator node) be identified from primary evidence?

NO EVIDENCE

 — answer, as recorded in the frozen source extract

Central heating connection existence confirmed only; no basement plan, mixing-node location, or riser topology found.

Boundary: HEAT-03 and all HEAT-xx candidates remain unassigned ontology candidates, not instantiated facts.

Same fact tracked as CI-03 on A3-EC01-05 — cited here, not re-registered.

FROZEN SEMANTIC COUNTS

7	5	6	5	7
PRIMARY UNITS	SECONDARY UNITS	RELATIONSHIPS	EVIDENCE STATES	OPEN / TBD

VALIDATION & INCLUSION DISCIPLINE

VALIDATION REQUIREMENT COUNT: 6 · GUARDRAIL COUNT: 2
SEM-MCD-001 INCLUDED: YES · HEAT-03 INCLUDED: YES

GUARDRAILS — 2

- UNKNOWN ENGINEERING GEOMETRY REMAINS UNKNOWN IN 3D — THIS PAGE DOES NOT CREATE OR MODIFY ANY 3D GEOMETRY.
- HEAT-03 AND ALL HEAT-xx CANDIDATES REMAIN UNASSIGNED ONTOLOGY CANDIDATES, NOT INSTANTIATED FACTS.

PROHIBITED INFERENCE

No installed device, confirmed location, validated topology, or completed field confirmation.
Missing evidence ≠ absence of an object. Unknown geometry is not shown as known geometry.
